Diabetes-related ocular surface disorders (DROD) are defined as chronic ocular conditions associated with diabetes mellitus, where corneal, conjunctival, and eyelid components are affected. DROD are highly prevalent, affecting approximately 30% of all patients with diabetes. They may occur in the presence or absence of clinical diabetes mellitus, as it is a risk factor for developing DROD. The most common ocular surface conditions in patients with diabetes are keratopathy, including corneal dystrophies (i.e., Fuchs corneal dystrophy 82157476af
